

To fix the problem with SEO you will have to give the link of your site in header.swf and in photos.xml (images.xml). To create header.swf use header fla.

Example:

If your site is www.mysite.com and you are using the template mx_joomla1 then, open header fla with your flash program and change the link on Actions

from
templates/mx_joomla1/images/photos.xml
to
http://www.mysite.com/templates/mx_joomla1/images/photos.xml

In photos.xml change the link for all the images from

templates/mx_joomla1/images/header/header.....
to
http://www.mysite.com/templates/mx_joomla1/images/header/header.....
